

Help Is Coming - How Hard Will You Be to Find?

by VINCENT T. PICA, II

District Captain, Sector Long Island Sound/South, D1SR • United States Coast Guard Auxiliary

When I teach seamanship classes, I eventually get around to the fact that the sea is a dangerous and hostile place - but, if prepared, you can increase your odds dramatically if you view yourself as an astronaut on a far away planet. Help is on the way. It will take time to get to you. What have you done to stay alive while the rescue team is heading for you? This column is about those steps.

Leave Her When She Has Sunk from Beneath You

The advice I always give to mariners is, "Never leave the boat, even if you can only cling to her up-turned keel, until she has sunk out from under you." It is hard to imagine how much easier it is to find an over-turned hull than it is to find your lonely head peering out from the waves - and it isn't easy to find that hull. It is like crossing the street at night. You can see the headlights of the car racing down the street quite clearly. But the driver can't see you, especially if you are blending into the night's colors. While you are bobbing in the waves, you can see the plane, helicopter or rescue boat - but your head can easily blend it with the waves and wave-caps, especially if you have no distinctive coloring or reflective material to help you stand out from the steely blue and white of wind-tossed seas... So, unless the vessel has sunk beneath you, stay with her. And

get up on her if you can since water will draw your body heat from you 25 times faster than air of the same temperature (see SSP, "Cold Water Survival, Hypothermia, Rescue & Recovery", 10/27/10).

Thar' She Goes - Time to Leave...

There will be conditions, God forbid, when you must abandon ship. Do you have a "ditch bag?" What's that? This is a bag - preferably water-proof - that contains as much vital material as you can bring. Remember, you're marooned on Mars and it will take time for the rescue rocket to get to you - will you survive until help gets there? What should be in your ditch bag? Well, obviously, priorities are implied since you can't drag the entire boat with you - she must have disappeared beneath the waves by now. Here are some thoughts:

1. Per above, the bag itself should be water-tight. Buoyant and brightly colored is an absolute "yes" too. If you don't have a raft, the bag itself will work as a supplemental life-jacket, keeping you above water.

2. Drinking water. You can survive for weeks without food; days, without water.

3. Water-proof handheld VHF radio; maybe it comes with a hand-cranked charger too...

4. If your cell phone isn't water-logged, it might make a lot of sense to have a hand-cranked charger...

5. First-aid kit

6. Flashlight and spare batteries

7. Flares, flares, flares... and only set them off when you can see the rescue team/vessel/plane/helicopter... day-smoke distress signals are great too...

8. A signaling mirror might even be more useful than day-smoke distress signals since you can throw a mirror's light signal for miles...

9. If your boat had an EPIRB aboard, take it with you. (see SSP, "EPIRBs, PPIRBs, GPIRBs - What???", 11/29/06 and SSP, "Personal Locator Beacons Locate You!" 8/11/10)

10. Your life-jacket should be on, not in the bag...

Done, Now What?

Now the question is this: How hard - or easy - have you made it for others to find you? Clearly, coloration matters so be sure that your life-jackets, flotation devices and your ditch bag are brightly colored and have reflective materials attached. Secondly, if you haven't invested in an EPIRB yet, consider this. Per USCG records, at 0500

hours on May 13, 2008, an EPIRB signal was generated by the captain of the 48-foot S/V Wolf. At the time, the S/V Wolf was 200 miles offshore, abeam of Brunswick, GA. She had been holed by some submerged object and was sinking. Within the hour (obviously implying the good luck combination of a USCG patrol and a near-by disaster), the USCG Cutter Reliance was alongside. Do you know how much that EPIRB cost the skipper? Close to zippo. He had rented it from BoatUS...

But, there is nothing like having your own gear and ensuring that it is always in readiness. What used to be over \$1,200 is now in the mid-hundreds. Over a 5-10 year life, what could be a cheaper or more reliable "come and get me!" beacon? What a pity it would be to survive the initial catastrophe, including getting off the may-day - but no one can find you and your crew.

Think like an astronaut. You have to survive the rescue-cycle - and you have to be found by determined parties searching for you in a dangerous and hostile environment.

BTW, if you are interested in being part of USCG Forces, email me at JoinUSCGAux2010@aol.com or go direct to John Blevins, who is in charge of new members matters, at FSO-PS@emcg.us and we will help you "get in this thing."

Teacher Federal Credit Union Reaches Out to Longwood's Homeless

The departments of Risk Management and Executive Management of the Teachers Federal Credit Union filled three plastic crates with non-perishable food for three homeless families in the Longwood School District. Above, Chris Welga, Assistant Vice President; and Jessica Prassi, Risk Management Assistant, deliver the festively-wrapped packages to Maureen Beatrice (far right), Homeless Liaison for the Longwood School District. Longwood, with approximately 300 homeless children, has among the highest homeless populations in New York State. Throughout the district, parents, staff and students have joined forces to provide food, clothing and presents to those in need in time for the holidays.

Students Make-A-Wish to Santa

The students in Longwood High School English classes have written more than 775 letters to Santa for Macy's Make-a-Wish Campaign. For each "Santa" letter Macy's receives, they donate one dollar to the Make-a-Wish Foundation, an organization that grants wishes for children with life-threatening medical conditions. English teacher Ellen Michael said many of her students made wishes for the Foundation itself, in the hope a great many ill children would have their requests granted. Others requested health and happiness for friends and family members and some sought more peace in life. "Very few made wishes for themselves," Ms. Michael said.

Highway Superintendent Meets with Longwood Reporter

Brookhaven Town Highway Superintendent John Rouse discusses improvements to Longwood Rd. with Bektas Birben, a junior and member of the Longwood Board of Education's Legislative Committee. Longwood Rd. has long been considered hazardous and improvements to the road have been a priority for school district officials. Mr. Rouse cited improvements to the road that include "a driver feedback sign," resurfacing and reconstruction of the road, sidewalks, and most recently, the installation of the red high friction traffic safety treatment. He said they were done in conjunction with the Division of Traffic Safety and the support of Councilwoman Connie Kepert. Bektas interviewed Mr. Rouse at the suggestion of Debra Winter, Assistant Superintendent for School and Community Relations who serves as the board liaison to the Legislative Committee. "Go straight to the source with your questions," she told him. Mr. Rouse not only answered his questions, but came to the school to meet Bektas.
