

More Weather - The Small Craft Advisory - That Means You!

by VINCENT T. PICA, II

District Captain, Sector Long Island Sound/South, D1SR • United States Coast Guard Auxiliary

When we recently wrote about getting a proper weather report before making way, (see SSP, "Drill, Baby, Drill - Weather Analysis", 8/4/10), it illustrated how important it can be to drill down into a simple weather report for a day to get the projections by hour. But there is another common newsflash that is heard by those that go down to the sea in ships. The Small Craft Advisory. This column is about that.

Small Craft Advisory

Despite conventional wisdom, the US Coast Guard does not issue Small Craft Advisory warnings. They are issued by NOAA's National Hurricane Center. What constitutes the threshold for an advisory? It is (relatively) straightforward. Quoting the USCG's Storm Center (<http://www.uscg.mil/news/storm-center>)

The threshold conditions for the Small Craft Advisory are usually 18 knots of wind (less than 18 knots in some dangerous waters) or hazardous wave conditions.

It is issued to alert mariners to sustained (more than two hours) weather or sea conditions, either present or forecast, that might be hazardous to small boats.

In one of those moments that make you scratch your head, on February 15, 1989, the National Weather Service retired its Coastal Warning Display net-

work nationwide. For over 100 years, display stations were established at yacht clubs, marinas, and Coast Guard stations to hoist flags, pennants and colored lights to warn mariners of storms at sea. The display stations were individually notified by the National Weather Service to raise the signals and again to lower them when the hazards passed. The National Weather Service paid for the visual signals; however, the display stations were operated by other agencies or volunteers. So, someone thought it was a good idea not to rely on other agencies and volunteers. The radio and news services would have to do.

As time passed, this became worrisome to many parties. When National Oceanic and Atmospheric Administration's own report, "Population Trends Along the Coastal United States: 1980-2008," noted that the narrow coastal fringe that makes up 17 percent of the US's contiguous land area is home to more than half of its population, action was taken. On June 1, 2007, the US Coast Guard re-established the program. From their press release of May 30, 2007, they said, "The re-establishment of this program, discontinued by the National Weather Service in 1989, re-enforces the Coast Guard's role as lifesavers and visually communicates that citizens should take personal

responsibility for individual safety in the face of an approaching storm."

The signal flag (or lights at night or in low visibility weather) that the US Coast Guard flies looks like this:

If you see more than one diamond-shaped pennant (or square one with black centers), head for high ground - gales, storms and hurricanes are coming!

What Other Warnings Are There?

Several - all of which mean head in if you are out (see SSP, "Skippering in Heavy Weather", 10/11/06) or stay home if you aren't.

Dense Fog Advisory

A dense fog advisory is issued when widespread fog is expected to reduce visibility to 1/4 mile or less over a large area for an extended period of time (more than 3 hours).

Wind Advisory

A wind advisory is issued when sustained winds of 31 to 39 mph or gusts of 46 - 57 mph are expected for 3 hours or longer.

Gale Warning

Gale warnings are issued when winds within 39 - 54 mph (34 - 47 knots) are expected within 24 hours, or frequent gusts between 35 knots and 49 knots are expected. Gale warnings may precede or accompany a hurricane watch.

Storm Warnings (wind over water)

Storm warnings are issued when winds within the range of 55 - 73 mph (48 - 68 knots) are expected within 24 hours.

Hurricane Watch/Warning

A hurricane warning indicates that hurricane winds of 74 mph (64 knots) and higher, or a combination of dangerously high water and rough seas, are expected to impact a specified coastal area. When a hurricane warning is announced, hurricane conditions are considered imminent and may begin immediately, or at least within the next 12 to 24 hours. When a warning is announced, it is of utmost importance that precautionary measures are taken for protection of life and property.

What IS a Small Boat?

There is no legal definition of what constitutes a "small boat." With that said, if you parsed through the COLREGs, you could make a reasonable argument based on those regulations that a "small boat" is under 60'. So, if there is a Small Boat Advisory and you're thinking about making way in your 25' Parker, understand that you are likely standing into danger.

FISHING WITH TONY

BEFORE SCHOOL STARTS,
TAKE THEM FISHING

■ by TONY SALERNO

Hey parents and guardians, Labor Day will soon be among us. That means vacation time with the kiddies is traded for return to school and returned to the labor force. Therefore before the time together with the kids becomes a faded memory, spend some quality time with them fishing, which will surely create a special bond and loyalty that, as they say in the Master Card commercial, will be "priceless."

Unlike sports of competition, spending quality time with your children fishing introduces them to a sport that is absent of pressure, a sport where there is no competing and where a child is not judged for his or her athletic ability. This is why so many children take to fishing so well. As parents or guardians, the value of being involved with our children on a one to one basis while fishing, will surely outweigh screams of disappointment and negativity from the sideline or bleachers. So, whether you are a parent looking to introduce your children to fishing while they are toddlers, or if there is a special teenager in your life that can benefit from some personal attention, then a day of fishing with your kids can lead to a lifetime of memories.

But hey, don't take it from me. It is a proven fact and statistically stated that kids spending quality time fishing with at least one parent grow smarter and learn the important factors of stewardship and are less likely to cross the path of destruction such as with substance abuse. Frankly it's quite simple. A \$5 cane pole complete with hook, line and float and a \$4 pack of spearing and a commitment to a couple of hours at your local marina or park is all that is needed to get the ball rolling. During the months of August and September, every local dock or pier that float or stand in saltwater around the Long Island shores are chock full of baby bluefish better known as snappers. And with an investment of fewer than 10 bucks per kid, they'll have hours of fun and entertainment. Snappers are abundant and easy to catch. Just check with your local bait and tackle shop for supplies and info.

Few fathers will be remembered for the money they made, the possessions they accumulated or the position they held in a Fortune 500 company. They will be remembered instead for the special times they spend with their children, the times during which their kids had their dad all to themselves. Grown children will look back on such times and say, "Thank you dad for taking me fishing. Thank you for fixing my bike. But most of all, thank you for being there."

John Salerno with a baby fluke safely released and time spent with me.
